

## Nor-Feed Stop Heat mobile application

### Product information

The Stop Heat mobile application from Nor-Feed allows to diagnose the level of heat stress of the animal based on breeding criteria identified by the nutritionist or veterinarian, and makes recommendations in terms of livestock overall management, optimization of nutrition and antioxidant intake.

Heat stress is responsible for the oxidative stress, a rupture of the oxidative balance which provokes irreversible consequences on the health and the performances of farm animals: loss of production, decrease of the quality of the finished products (meat, milk, and eggs), decreased well-being, etc.

The application can be downloaded on Android and iOS platforms.
